PROFESSIONAL SUMMARY

Frontend Team Lead and Architect with 8+ years in web development, specializing in building data-rich, interactive web applications. Expertise in React and TypeScript, with a strong command of TailwindCSS and API integration. Proven ability to translate complex data and real-time interactions into seamless user interfaces, while maintaining high standards for code quality, performance, and maintainability. Comfortable delivering full-stack features with Node.js to improve integration and release speed.

EXPERIENCE

Full-stack Team Lead / Architect   2024-02 - 2025-12

Warp Jump Company

Built the frontend architecture from scratch for a high-traffic platform using TypeScript, Vue 3, and Nuxt 3. Implemented a Node.js / Nuxt (Nitro/H3) API proxy layer to integrate with backend services (gRPC) and expose typed REST contracts to the frontend. Added caching and session-related infrastructure with Redis to keep integrations predictable and performant. Led a frontend team (8-10 engineers): set standards for code quality, reviews, delivery process, and day-to-day technical decisions. Designed a pnpm-workspaces monorepo with reusable packages (Nuxt modules/layers, UI kit, utilities) shared across multiple apps and client variants. Built a Cloudflare Worker for complex redirect logic and a browser Service Worker to support client-side routing and edge cases.

Senior Frontend Developer (acted as Frontend Tech Lead)   2021-04 - 2024-01

AIR Media-Tech

Built and maintained the main customer account product for a media-creators ecosystem, including interactive UI, dashboards, billing flows, and an in-app support chat. Implemented cross-domain session continuity between products to keep users signed in when moving across domains. Built small Node.js utilities and proxy endpoints around Nuxt to simplify integrations and local development. Shipped multiple client-support products and their landing pages, keeping shared UI patterns consistent across codebases. Introduced frontend standards and review practices (linting, conventions, code review), improving maintainability and onboarding.

Frontend Developer   2018-07 - 2021-03

Open Public Finance

Worked on public finance portals (Openbudget and investment projects) used by 100k+ citizens. Built interactive dashboards and data visualizations, and implemented core business logic in Vue/Nuxt. Delivered responsive UI and PWA features, collaborating with designers and backend engineers.

EDUCATION

Master's Degree in Laser and Optoelectronics Technologies (Faculty of Physics)

2000-01 - Present

Taras Shevchenko National University of Kyiv

Frontend Advanced course

2017-11 - 2018-05

GOIT

Frontend HTML/CSS course

2017-09 - 2017-11

Vertex Academy

SKILLS
